

## McGregor Museum Kimberley

### Botany Department: Plant Database

Computer-based data capture is a more efficient means of recording, storing and retrieving data. The KMG Herbarium Collection Manager is busy with capturing all plant-related data from the collection onto SpecimenDB, kindly donated by the National Herbarium (PRE), South African National Biodiversity Institute. We hope to enlist voluntary assistance with data capture to expedite the process at some stage.

Once all our specimens have been recorded the following products are envisaged: flora checklists, nomenclatural lists (plant author names), taxonomic lists and inventories (e.g. rare plants).
